Your Differentiation Assistant

A plain-language guide to the Gemini prompt for reteaching, differentiation, challenge, and co-teaching (version 4)

What it does, in one sentence

You give Gemini your materials (a test, your notes, or a spreadsheet of results), and it walks you step by step to **ready-to-use materials** that help students who **don't get it yet**, students who **already get it**, and everyone in between. Then it delivers them as a Google Doc, Slides, a Form, a Sheet, or text you can copy.

BLUE = Getting started | GREEN = Support (not yet) | PURPLE = Challenge (got it) | GOLD = Whole class

ORANGE = Assessment | TEAL = Co-teaching | PINK = English learners | GRAY = Safety & limits

How to start (pick one)

BEST

Make a Gem

In Gemini, choose **Gems → New Gem**, paste the prompt text into **Instructions**, and save. Open the Gem and type `hi`.

GOOD

Paste the text

Copy all the text below the line in the file, paste it as your first message, and press **Send**.

OK

Upload the file

Upload the .txt file and type:

```
Follow these instructions. Start with Step 1.
```

Settings: use your **school Google account** and the **Pro** model, with **Guided Learning off**. Answer each question with just a number or a few words.

What happens: 7 simple steps

1. **Tell it your goal.** Choose from: analyze results, differentiate, reteach, challenge, co-teach, or build assessments.
2. **Share your materials.** Upload a PDF, a CSV, a Doc, or a photo, or just describe what you need.
3. **It checks your files** and tells you what it found. You confirm the course, grade, and lesson goal.
4. **It shows who needs what.** You get a question-by-question results table and groups listed by **row number**, never by name.
5. **You pick what to make.** You only see the options that fit your goal (type `ALL` to see every option).
6. **You pick the format.** Google Doc, Slides, Form, Sheet, or copy-and-paste text.
7. **It shows a short plan, then builds it.** It checks every answer, delivers the work in parts if it's long, and offers revisions.

Using your test results (including Pear Assessment)

DO THIS

Bring your results in

- **Pear Assessment (formerly Edulastic):** Gemini **can't log in**, so download a report table as a **CSV** (from Insights or Reports). Some reports need a Premium or Enterprise plan.
- Save the **test as a PDF** using the print option, then "Save as PDF".
- Upload **both files together**. You can delete the names column first.

YOU GET

A clear results table

- For each question: the skill, **% correct**, the most common wrong answer, and the likely misconception.
- Flags: **below 60%** = reteach, **60–79%** = practice, **80%+** = mastered. You can change these.
- Groups: Mastered / Partial / Not yet, listed by **row number** so you can match them to names yourself.

What it can make for you: 26 options

SUPPORT: NOT YET

- **1** Reteach mini-lesson (a new way to explain it)
- **2** Fill a missing earlier skill
- **3** Scaffolded version of an assignment
- **4** "Find and fix the mistake" task
- **5** Guided notes or graphic organizer
- **6** Vocabulary pre-teach set

CHALLENGE: GOT IT

- **7** Extension task (deeper thinking)
- **8** Compacting: skip what they've mastered
- **9** Easy-to-start, hard-to-finish problem
- **10** Independent project with a contract
- **11** "Try it before the lesson" challenge

WHOLE CLASS

- **12** Three-tier assignment (Circle / Square / Triangle)
- **13** Mild / Medium / Spicy practice
- **14** Next-day small groups
- **15** Station rotation plan
- **16** Choice board
- **17** Leveled reading (with the original text too)
- **18** Spiral review warm-ups

ASSESSMENT

- **19** Exit ticket and quick-check questions
- **20** Pre-check before a unit
- **21** Accessible test and retake version
- **22** Feedback comment bank
- **23** Student self-reflection sheet

CO-TEACHING

- **24** Co-taught lesson plan: which model to use, who does what (minute by minute), groups, and materials
- **25** Quick strategy ideas

ENGLISH LEARNERS

- **26** Language supports by proficiency level: sentence starters, key words, and visuals. **The language gets simpler; the thinking doesn't.**

How your finished work arrives

You choose	What you get
1. Google Doc	Built in Canvas. Click **Export to Docs**. To print or save a PDF: **File → Download → PDF**.
2. Google Slides	One idea per slide, with speaker notes, exported to Slides.
3. Google Form quiz	Questions and choices ready to paste into a Form, with correct answers marked.
4. Google Sheet	Clean tables you can export to Sheets.
5. Copy and paste	Text in the chat. This is always available.

Every document has the same layout: a **Teacher Packet** (goal, data summary, how to run it, groups, prep time, answer keys), then **Student Pages**, each version on its own page, with **no answer keys**. Long documents come in parts. Type `NEXT` to get the next part.

Built-in safeguards

FAIR FOR EVERY STUDENT

- **Same goal for everyone.** Support adds help, not less work. Challenge adds depth, not more work.
- Groups change based on evidence and have neutral names (no "low" or "gifted" labels).
- It never sorts students by "learning styles."

ACCURATE & PRIVATE

- Solves every problem and checks every answer key and calculation. Anything uncertain is marked **[VERIFY]**.
- **No student names** in its replies, only row numbers.
- **You decide** groups, grades, and accommodations. It never reads IEP or 504 documents.

What it can't do

- It can't log in to Pear Assessment, Google Classroom, or any other website. Download your files and upload them.
- It can't send, post, or save files for you. It drafts them, and you export or copy them.
- Export buttons depend on your school account. If they're missing, use copy-and-paste text.
- It can make mistakes. **Always review before using it with students.**

Quick tips

Stuck?
Type `continue` or answer its last question with a number.

Want everything?
Type `ALL` to see all 26 options.

Change your mind?
Type `revise`, or ask for the same material in another format.
